

GO WHEREVER YOUR MOOD TAKES YOU

MOODSTRUCK 3D FIBER LASHES+

Ingredient List

New Transplanting Gel

Water (Aqua) hydrates and cleanses, and helps to distribute other ingredients evenly over the skin.

Butylene Glyco is a humidifying and delivery ingredient.

VP/Eicosene Copolymer is a humidifying and delivery ingredient.

Sucrose Acetate Isobutyrate helps liquids dry into a film.

Beeswax (Cera Alba) has bodifying properties that act as an emollient.

Copernicia Cerifera (Carnauba) Wax is a firm, natural wax refined to create the sticky texture of the Transplanting Gel.

Adipic Acid/Diglycol Crosspolymer prevents color of liquid products from transferring to other surfaces once the liquid is dry.

Acrylates/Octylacrylamide Copolymer is a hair fixative.

Glycerin is a type of alcohol that conditions hair and skin.

Stearic Acid is an emollient that comes from palm trees and is often used to soothe and soften the skin.

Polyquaternium-46 is a hair fixative.

Dimethicone helps keep moisture in the skin by forming a barrier on its surface.

Chamomilla Recutita (Matricaria) Flower Extract provides a soothing fragrance.

Phenoxyethanol preserves product by preventing microbial growth and spoiling.

Panthenol moisturizes skin and hair.

Tocopheryl Acetate (Vitamin E) is a vitamin that is already present in our bodies and skin. It conditions, softens, and moisturizes the lashes.

Synthetic Fluorphlogopite helps control the thickness of a liquid.

Allantoin helps to smooth skin and improve moisture retention.

Iron Oxides (CI 77499) also refers to Black Iron Oxide, a mineral that gives our lash gel its striking black color.

Hydrogenated Tallow Glycerides soften and condition the skin.

Palmitic Acid soften and condition the skin.

Tromethamine is a pH adjuster and buffering agent.

Tocopherol softens and conditions the skin.
